

ROLE

You are an elite creative director, senior UX/UI designer, conversion-rate optimization specialist, brand strategist, motion designer, and senior full-stack e-commerce developer.

Your job is to design and build a **premium, conversion-focused DTC e-commerce website for the US market** selling a red-light LED face mask.

This is NOT supposed to look like a generic Shopify store, dropshipping store, template website, or basic product landing page.

The website should feel like a **high-end American beauty/wellness technology brand** with a strong visual identity, premium product presentation, cinematic motion, excellent UX, and a highly optimized purchase journey.

Think of the quality level of premium brands such as Apple, Dyson, Therabody, CurrentBody, HigherDOSE, Omnilux, and other high-end DTC wellness/beauty brands — but DO NOT copy their branding, layout, text, or identity.

Create an original brand experience.

CORE PRODUCT

Product:

Red Light Therapy LED Face Mask

Retail market:

United States / American customers

Product price:

\$129.99 USD

The product should be positioned as a **premium at-home beauty/wellness technology product**, not as a cheap LED mask.

The website must make the visitor immediately understand:

1. What the product is
2. What problem it is designed to address
3. Why this product is different
4. Why they should trust the brand
5. Why they should buy it now
6. How to use it

IMPORTANT: INFORMATION PLACEHOLDERS

I will provide you with many of the real brand assets and business details later.

DO NOT invent critical business information and present it as real.

Instead, create a clean configuration/content structure containing placeholders for things such as:

- [BRAND NAME]
- [LOGO]
- [DOMAIN]
- [PRODUCT NAME]
- [PRODUCT IMAGES]
- [PRODUCT MOCKUPS]
- [PRODUCT VIDEOS]
- [BRAND STORY]
- [COMPANY INFORMATION]
- [SUPPORT EMAIL]
- [CONTACT INFORMATION]
- [SHIPPING POLICY]
- [RETURN POLICY]
- [REFUND POLICY]
- [PRIVACY POLICY]
- [TERMS & CONDITIONS]
- [WARRANTY]
- [PAYMENT METHODS]
- [PAYMENT PROVIDER]
- [SHIPPING PROVIDER]
- [CUSTOMER REVIEWS]
- [CUSTOMER PHOTOS]
- [BEFORE/AFTER IMAGES]
- [CERTIFICATIONS]
- [CLINICAL / SCIENTIFIC REFERENCES]
- [SOCIAL MEDIA LINKS]
- [FAQ]
- [PRODUCT SPECIFICATIONS]

Build the website so these can easily be replaced later without redesigning the entire site.

If information is missing, use clearly labeled placeholders.

Never fabricate certifications, clinical studies, customer reviews, medical claims, statistics, awards, or testimonials.

VISUAL DIRECTION

The visual identity should be:

- Black / near-black background
- Deep dark sections
- Red LED glow
- Subtle red gradients
- Cinematic lighting
- Premium typography
- High contrast
- Minimal but visually rich
- Futuristic
- Beauty-tech
- Sophisticated
- Clean
- Luxurious
- Modern

The red LED illumination from the mask should become part of the brand identity.

The website should visually communicate:

technology + beauty + luxury + science + transformation

Avoid:

- Cheap dropshipping aesthetics
- Generic Shopify templates
- Excessive red everywhere
- Overcrowded layouts
- Cheap-looking gradients
- Excessive text
- Stock-photo-heavy design
- Generic "Buy Now" buttons everywhere
- Fake urgency
- Fake countdown timers
- Fake reviews
- Fake certifications
- Fake medical claims

The product itself should remain the visual hero.

CINEMATIC HERO SECTION

The first screen must immediately grab attention.

Create a cinematic hero experience where the LED mask is the main visual object.

I will provide multiple product mockup images.

Use these images intelligently.

The hero should feel almost like a premium product launch page.

Possible visual behavior:

- Mask appears centered or slightly offset
- Dark environment
- Subtle red LED glow
- Product slowly scales / moves as the user scrolls
- Background lighting reacts subtly to scrolling
- Product can rotate or transition between provided images if technically appropriate
- Red light particles/glow can subtly move in the background
- Typography can fade/slide in
- Product can become progressively more prominent

DO NOT over-animate.

Animations should feel expensive and intentional.

The animation should enhance the product rather than distract from it.

SCROLL-BASED STORYTELLING

The website should feel like a story.

As the user scrolls:

SECTION 1: Brand/product introduction

SECTION 2: Product becomes the hero

SECTION 3: Explain the technology / wavelengths / features

SECTION 4: Benefits

SECTION 5: Product close-up / detail shots

SECTION 6: How it works

SECTION 7: Before / after experience

SECTION 8: Social proof

SECTION 9: Reviews

SECTION 10: Trust / certifications / science

SECTION 11: FAQ

SECTION 12: Final purchase CTA

The product should visually remain present throughout the journey.

Use smooth scroll-triggered animations where appropriate.

PRODUCT PURCHASE EXPERIENCE

The product price is:

\$129.99

Display pricing in a premium way.

If a higher original price is provided later, show:

~~\$XXX~~

\$129.99

with a clear but tasteful savings indicator.

Do NOT invent a fake original price.

The main purchase CTA should be visually obvious but not obnoxious.

Examples:

GET YOUR MASK — \$129.99

SHOP NOW

EXPERIENCE RED LIGHT THERAPY

Use the final wording after I provide the brand voice.

The purchase section should include placeholders for:

- Quantity selector
- Add to Cart
- Buy Now
- Payment methods
- Shipping information

- Returns
 - Warranty
 - Secure checkout messaging
-

E-COMMERCE ARCHITECTURE

Build the website so it can function as a real e-commerce store.

Prepare the structure for:

- Product page
- Cart
- Checkout
- Customer account if needed
- Product variants if needed
- Quantity selection
- Discount codes
- Shipping
- Taxes
- Payment providers
- Order confirmation
- Email capture
- Abandoned cart
- Analytics
- Meta Pixel
- Google Analytics
- Google Ads conversion tracking
- TikTok Pixel if needed

Keep these integrations modular.

If an integration cannot be connected without credentials, create a clearly labeled configuration placeholder.

For example:

[STRIPE / SHOPIFY PAYMENT CONFIGURATION]

[PAYPAL CONFIGURATION]

[META PIXEL ID]

[GOOGLE ANALYTICS ID]

Do not pretend an integration is active when it is not.

US MARKET

This is primarily an American e-commerce website.

Use:

- USD
- American English
- US shipping terminology
- US-friendly checkout UX
- Mobile-first design
- Trust-focused messaging

Prepare placeholders for:

- Free US shipping
- Estimated delivery time
- Return window
- Warranty
- Customer support

Do not invent actual shipping times or policies.

TRUST SYSTEM

Trust is extremely important.

Create a premium trust architecture containing sections for:

- Customer reviews
- Customer photos
- User-generated content
- Before / after
- Product specifications
- Certifications
- Testing information
- Technology explanation
- Warranty
- Returns
- Secure checkout
- Shipping
- FAQ

For certifications and scientific claims, use placeholders until I provide legitimate information.

Example:

[INSERT VERIFIED CERTIFICATION]

[INSERT VERIFIED CLINICAL STUDY]

[INSERT VERIFIED TESTING INFORMATION]

Never fabricate these.

BEFORE / AFTER SECTION

Create a visually impressive before/after section.

The user should be able to interact with a slider:

BEFORE ←————→ AFTER

Use a smooth draggable comparison slider.

I will provide the real images later.

Do not create fake customer results.

Use placeholders until the real images are provided.

This section should feel premium and editorial rather than like a cheap advertisement.

CUSTOMER REVIEWS

Create a high-end testimonial section.

Use:

- Customer profile photos
- Names
- Star ratings
- Review text
- Optional verified purchase badge

But until I provide the actual reviews:

[INSERT REAL CUSTOMER REVIEW]

Never invent testimonials and present them as real.

Design the component so adding 5, 10, 20+ reviews later is easy.

USER GENERATED CONTENT

Create a section for real customer images/videos.

Possible design:

- Instagram/TikTok-style vertical cards
- Customer photo grid
- Short-form video cards
- Hover interactions
- Smooth horizontal scrolling carousel

Use placeholders for now.

I will provide real customer content later.

SCIENCE / TECHNOLOGY SECTION

Explain the technology in an understandable way.

Possible topics:

- Red light
- Near-infrared light if applicable
- Wavelengths
- LED technology
- Treatment duration
- Coverage
- Comfort
- Ease of use

However:

DO NOT make medical claims without verified information.

Use placeholders for exact specifications:

[WAVELENGTH]

[LED COUNT]

[POWER DENSITY]

[ENERGY OUTPUT]

[TREATMENT TIME]

[WARRANTY]

[DEVICE MATERIAL]

[WEIGHT]

etc.

The section should make the product feel technically credible without becoming boring.

HOW IT WORKS

Create a simple 3–4 step visual process.

Example structure:

01 — Put on the mask

02 — Start your session

03 — Relax

04 — Continue your skincare routine

Replace the final copy once I provide the actual instructions.

Use animated icons / product visuals.

MOBILE EXPERIENCE

This is extremely important.

The majority of traffic may come from mobile ads.

Design mobile FIRST.

The mobile experience must have:

- Fast loading
- Large product visuals
- Clear CTA
- Easy scrolling
- Sticky Add to Cart where appropriate
- Smooth animations that don't destroy performance
- Touch-friendly interactions

- Readable typography
- Optimized image sizes

Do not simply shrink the desktop website.

Create a genuinely designed mobile experience.

PERFORMANCE

The website should look extremely sophisticated while remaining fast.

Prioritize:

- Lazy loading
- Optimized images
- WebP / AVIF where appropriate
- Efficient animations
- Minimal JavaScript
- GPU-friendly transforms
- Avoid unnecessary animation libraries
- Avoid huge video files unless necessary
- Responsive image loading

Animations should never significantly hurt Core Web Vitals.

ANIMATION SYSTEM

Use animation intentionally.

Potential effects:

- Scroll reveal
- Fade
- Scale
- Parallax
- Image transitions
- Mask rotation
- Glow movement
- Text reveal
- Sticky product sections
- Horizontal scroll sections
- Before/after slider
- Magnetic buttons
- Micro-interactions
- Hover effects
- Cart animation

Use modern technologies such as:

- GSAP
- Framer Motion
- CSS animations
- Intersection Observer
- Lenis or another smooth scrolling solution

Choose the appropriate technology based on the actual implementation.

Do not add libraries simply because they are trendy.

NAVIGATION

Create a minimal premium navigation.

Possible structure:

[LOGO]

Shop

Technology

How It Works

Reviews

FAQ

[SHOP NOW]

On mobile:

Hamburger menu + persistent purchase CTA where appropriate.

Navigation should remain minimal.

HEADER BEHAVIOR

The header should transform while scrolling.

For example:

Initial state: Transparent / cinematic

After scrolling: Dark translucent / glass effect

The logo and CTA remain visible.

Make this subtle.

CART

Create a beautiful slide-out cart drawer.

It should include:

- Product image
- Product name
- Quantity
- Price
- Discount if applicable
- Shipping message
- Checkout CTA
- Continue Shopping
- Trust/payment icons

Potential upsell area:

[OPTIONAL FUTURE PRODUCT / ACCESSORY]

Keep this modular.

FOOTER

Create a comprehensive but clean footer.

Include placeholders for:

Shop

About

Contact

FAQ

Shipping

Returns

Warranty

Privacy

Terms

Social Media

Email signup

Payment icons

Copyright

Company information

EMAIL CAPTURE

Create a premium email capture section.

Possible message:

[INSERT EMAIL CAPTURE OFFER]

Example structure:

"Be the first to experience what's next."

Email field + CTA.

Do not invent a discount.

Use:

[EMAIL OFFER PLACEHOLDER]

BRAND STORY

Create a section for the future brand story.

Use placeholder structure:

"WHY [BRAND NAME] EXISTS"

[INSERT BRAND STORY]

This should feel emotionally compelling without becoming cliché.

CONVERSION STRATEGY

Design the website around the psychology of a premium DTC purchase.

The page should progressively answer:

ATTENTION

What is this?

INTEREST

Why is this interesting?

DESIRE

Why do I want it?

TRUST

Can I believe this brand?

OBJECTION HANDLING

What if it doesn't work? What if I don't like it? Is it safe? How long does shipping take? Can I return it? Is it worth \$129.99?

ACTION

Buy now.

Use strategic CTA repetition without making the page feel spammy.

OBJECTION HANDLING

Create a section addressing common objections:

"Is this right for me?"

"How often do I use it?"

"How long does a session take?"

"Does it hurt?"

"Can I use it with my skincare routine?"

"How long does shipping take?"

"What is your return policy?"

"What warranty is included?"

"What wavelengths does it use?"

Only use factual answers once I provide verified information.

SEO

Prepare the website for SEO.

Include:

- Proper semantic HTML
- Metadata
- Open Graph
- Twitter/X cards
- Product schema
- Organization schema
- FAQ schema where appropriate
- Image alt text
- Clean URLs
- Sitemap structure
- Robots configuration
- Canonical URLs

Create placeholders for:

[SEO TITLE]

[META DESCRIPTION]

[OG IMAGE]

LEGAL / COMPLIANCE

Prepare placeholders for:

- Privacy Policy
- Terms & Conditions
- Shipping Policy

- Return Policy
- Refund Policy
- Warranty
- Cookie Policy
- Medical disclaimer if applicable

Do not fabricate legal text and claim it is legally sufficient.

Clearly mark anything that requires legal review.

Avoid unsupported medical claims.

IMAGE SOURCING

I will provide my own product mockups and product images.

Prioritize those assets.

However, you MAY use internet-sourced visual references, stock imagery, textures, backgrounds, or other assets where appropriate to improve the design.

When using external assets:

- Prefer high-quality sources
- Keep licensing in mind
- Do not use copyrighted brand assets without permission
- Do not copy another company's website
- Use external references for inspiration, not duplication

You may research modern beauty-tech / wellness e-commerce websites for design inspiration.

COMPETITOR / DESIGN RESEARCH

Before implementing the final design, research current premium DTC beauty-tech and wellness websites.

Study:

- Layout patterns
- Navigation
- Product storytelling
- Conversion patterns
- Typography
- Animation
- Social proof
- Product photography
- Mobile UX

- Checkout flow

Use this research to create something original.

Do NOT clone any website.

TECHNICAL IMPLEMENTATION

Choose the best modern architecture for the project.

If appropriate, use:

- React
- Next.js
- TypeScript
- Tailwind CSS
- Framer Motion / GSAP
- Component-based architecture

Keep the code clean and maintainable.

Create reusable components for:

- Header
 - Hero
 - Product showcase
 - CTA
 - Product information
 - Technology section
 - Benefits
 - How it works
 - Before/after
 - Reviews
 - UGC
 - FAQ
 - Newsletter
 - Footer
 - Cart
 - Product configuration
-

CONTENT MANAGEMENT

Make content easy to update.

Centralize configurable information where possible.

For example:

product.ts

brand.ts

reviews.ts

faq.ts

config.ts

or an equivalent architecture.

I should be able to give you new information later and you should be able to update the site without rebuilding the entire structure.

PRODUCT ASSET HANDLING

I will send you multiple product mockups.

When I upload them:

1. Identify which image is best for hero
2. Identify which images work best for product detail
3. Identify which work for technical sections
4. Identify which work for scroll animations
5. Identify which work for mobile
6. Remove unnecessary visual clutter if possible
7. Maintain consistent presentation

Do NOT distort the product.

The mask must remain visually accurate.

FINAL PAGE STRUCTURE

Aim for a structure similar to:

1. Cinematic Hero
2. Product Introduction
3. Problem / Desire
4. Product Scroll Animation
5. Technology
6. Benefits
7. Product Details
8. How It Works
9. Before / After

10. Social Proof
11. Customer Reviews
12. UGC
13. Science / Certifications
14. FAQ
15. Final Product CTA
16. Newsletter
17. Footer

This is a guideline, not a rigid requirement.

If your UX analysis suggests a better order, use the better order.

BRAND FEEL

When someone visits this website, the immediate impression should be:

"Wow, this looks expensive."

Then:

"This product looks technologically advanced."

Then:

"I understand what it does."

Then:

"I trust this company."

Then:

"I want this."

Then:

"I can easily buy it."

That is the objective.

VERY IMPORTANT: DO NOT FINISH WITH A TEMPLATE

I do NOT want a simple static mockup.

I want you to build the closest possible version of a **real, launch-ready premium e-commerce website**.

It should feel like an actual brand that could spend millions of dollars on advertising.

The website must be:

- Premium
 - Fast
 - Responsive
 - Animated
 - Conversion-focused
 - Trustworthy
 - Mobile-first
 - US-market optimized
 - Product-focused
 - Easy to maintain
-

WORKFLOW

Follow this workflow.

PHASE 1 — RESEARCH

Research premium beauty-tech / wellness DTC websites and current UX patterns.

Do not copy them.

PHASE 2 — BRAND SYSTEM

Create the initial:

- Color system
- Typography
- Spacing
- Buttons
- Cards
- Icons
- Animation language
- Product presentation language

PHASE 3 — INFORMATION ARCHITECTURE

Plan the entire customer journey and page structure.

PHASE 4 — BUILD

Build the complete website.

PHASE 5 — RESPONSIVE

Optimize desktop, tablet and mobile independently.

PHASE 6 — CONVERSION REVIEW

Review the site as if you were a US customer seeing it from a Meta/Facebook advertisement.

Ask:

"Would I understand this product within 5 seconds?"

"Would I trust this brand?"

"Would I understand why it costs \$129.99?"

"Could I easily buy it?"

"Are there objections that haven't been answered?"

Fix anything that reduces conversion.

PHASE 7 — FINAL QA

Check:

- Broken links
- Buttons
- Cart
- Responsive behavior
- Animations
- Image loading
- Accessibility
- SEO
- Performance
- Navigation
- Checkout flow
- Forms
- Mobile experience

IMPORTANT FUTURE WORKFLOW

After you create the initial website, I will send you information piece by piece.

For example:

"Here is the brand name."

"Here is the logo."

"Here are the product images."

"Here are the real customer reviews."

"Here is the shipping policy."

"Here are the certifications."

"Here is the payment provider."

"Here is the domain."

"Here is the Meta Pixel."

"Here are the before/after photos."

Whenever I provide new information, integrate it into the existing website instead of creating a completely different website.

Maintain visual consistency.

MISSING INFORMATION DASHBOARD

At the end of the implementation, create a clearly visible developer/configuration checklist containing every piece of information that is still required before launch.

For example:

☐ Brand name ☐ Logo ☐ Domain ☐ Product name ☐ Product images ☐ Product specifications ☐
Wavelength information ☐ Real reviews ☐ Customer photos ☐ Before/after images ☐ Certifications ☐
Shipping policy ☐ Return policy ☐ Warranty ☐ Payment provider ☐ Analytics ☐ Meta Pixel ☐ Google
Analytics ☐ Support email ☐ Legal documents ☐ Social media links

Mark completed items as they become available.

FINAL INSTRUCTION

Do not ask me for every piece of information before starting.

Build the complete visual and technical foundation using clearly labeled placeholders.

When information is missing, create the component and leave the appropriate placeholder.

When I provide the information later, replace the placeholder.

The final result should look like a **premium, cinematic, animated US beauty-tech brand website selling a \$129.99 red-light LED face mask**, not a generic e-commerce template.

Start by researching the visual direction and then build the website.
